Hand Gel

Children in grades K-5 use hand gel disinfectant prior to lunch. A staff member squirts a small amount of gel into the hand of each student prior to eating. The student is instructed to rub it over his/her palms and fingers. Antiseptic gel has been shown to be 92-99% effective in eliminating common germs within 15 seconds of application. This decreases transmission of cold and flu viruses among students, thus decreasing school days missed due to illness. If for any medical reason your child is unable to use this gel, please contact the health office or principal and other arrangements will be made.

Thank you.
